New catalogues: Bore machining, milling and clamping

MAPAL has published new catalogues for the bore machining, milling and clamping areas. The product ranges' assortments have been comprehensively revised and are now even more adapted to customer needs.

In addition to established products, the catalogue includes a number of innovations. Over a total of 1,500 pages, users can find 13,500 products to select the perfect reaming, boring, drilling or milling tool and matching clamping device for practically all machining tasks. By streamlining the range, high availability from stock has been guaranteed for the tools. MAPAL therefore offers quick delivery times without sacrificing quality. Around 80 percent of listed items are available ex works in Germany. They can be delivered immediately after receiving the order.

The structure of catalogues' content has also been given a new look. The revised assortment with configuration options and a clever selection logic offer orientation when choosing the optimal tool. MAPAL has consolidated the previously separate catalogues for the product groups drilling from solid, boring, countersinking as well as reaming and fine boring into a single new bore machining catalogue. Items no longer listed in the new catalogue can still be ordered upon request.

PRESS RELEASE

Date: March 3, 2022

The new catalogue programme is available as a navigable PDF on the company's website. For sustainability reasons, MAPAL has dispensed with initial dispatch in paper form.
